

09th December 2019

Consumer Price Index for South Sudan November 2019

The South Sudan annual Consumer Price Index (CPI) increased by 72.7% from November 2018 to November 2019. The increase was mainly driven by higher prices in food and non-alcoholic beverages.

The annual CPI increased in Juba by 42.4% and in Malakal by 162.9% and Wau by 23.7% from November 2018 to November 2019.

The South Sudan monthly CPI decreased by 33.2% from October 2019 to November 2019. The monthly CPI decreased by 23.1% in Juba, 45.4% in Malakal and 53.9% in Wau.

Annual CPI

The annual growth in the CPI for South Sudan increased by 72.7% in November 2019 compared to 33.5% for November 2018. Food and non-alcoholic beverages increased by 87.1% from November 2018 to November 2019, while the prices for health decreased by 23.1% and restaurants and hotels increased by 34.2% over the same period.

The low prices of food and non-alcoholic beverages were mainly driven by lower prices of vegetables, clothing and footwear and housing gas, furnishing and equipment etc.

Monthly CPI

In addition to annual CPI, the National Bureau of Statistics also calculates CPI on a monthly basis. These figures are subject to volatility because of seasonal products entering and exiting the markets, so should be used with caution. Please see the technical notes for further explanation of how CPI is calculated.

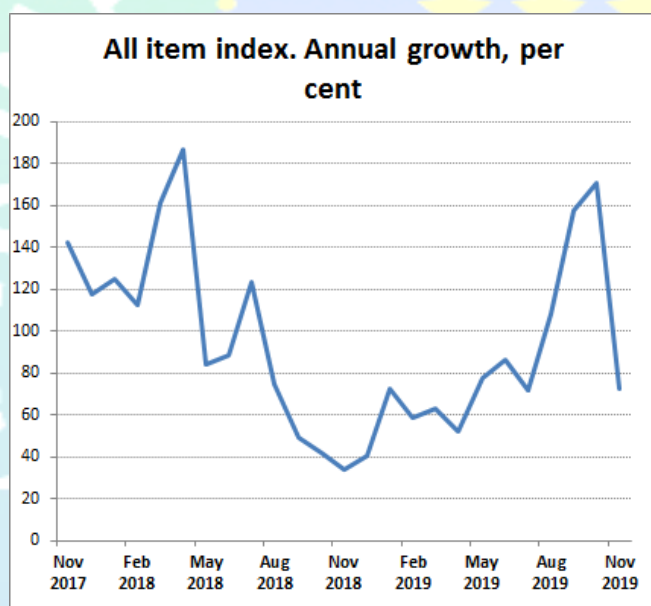

The monthly CPI decreased by 33.2% between October 2019 and November 2019. Over this period the price for food and non-alcoholic beverages decreased by 31.4%, and health increased by 44.7%.

The decrease in the price of food and non-alcoholic beverages was mainly caused by lower prices of vegetables, clothing and footwear and housing gas, furnishing and equipment etc.

There are four new consumption groups measured in the CPI: clothing and footwear, health, communication and education. There are annual rates of change for these groups from June 2012.

Regional CPI

In June 2011, price collection was expanded from Juba alone to include Wau and Malakal. NBS now publishes an index for all of South Sudan, and three separate regional indices for Juba, Wau and Malakal. The individual regions have different weights reflecting the different consumption baskets in the three states. Annual changes are available for Wau and Malakal from June 2012.

Annual inflation in November 2019 was 42.4% in Juba, and 162.9% in Malakal, and 23.7% in Wau compared with 72.7% for South Sudan. Prices of food and non-alcoholic beverages increased in Juba by 54.7%, 420.4% in Malakal, and 25.8% in Wau respectively over this period.

From October 2019 to November 2019, the monthly CPI decreased in Juba by 23.1%, 45.4% in Malakal and 53.9% in Wau respectively. Over this period the price for food and non-alcoholic beverages decreased by 24.6% in Juba, 32.5% in Malakal and 63.1% in Wau respectively.

Technical note

National Consumer Price Index (CPI) for South Sudan

Since October 2011, a national CPI has been published for South Sudan. The index has been rebased to June 2011=100 and is directly chained on to the previous Juba index which got a time series back to May 2007. The national CPI has weights calculated from the 2009 National Baseline Household Survey (NBHS) and includes all twelve major consumption groups in the Classification of Individual Consumption by Purpose (COICOP). The item basket has been revised and updated according to the results from the NBHS. With price collection in the major three cities of Juba, Malakal and Wau, the price collection covers all three regions of South Sudan.

What is NBS?

The National Bureau of Statistics (NBS), formerly known as the Southern Sudan Centre for Census, Statistics and Evaluation (SSCCSE), is the official statistical agency of the Government of South Sudan.

Republic of South Sudan National Basket:-

Until May 2011, the consumption basket contained eight COICOP groups. Since May 2011, the South Sudan National Basket has contained the following twelve COICOP groups:

No/S	Group	Number of items
1.	Food and non-alcoholic beverages	53
2.	Alcoholic beverages and tobacco	5
3.	Clothing and footwear	7
4.	Housing, water, electricity, gas, and other	6
5.	Furnishings, household equipment and routine household maintenance	7
6.	Health	4
7.	Transport	3
8.	Communication	1
9.	Recreation and culture	3
10.	Education	3
11.	Restaurants and hotels	7
12.	Miscellaneous goods and services	10

Consumer Price Index (CPI):

The Consumer Price Index is an index which tracks the price of a representative basket of goods and services consumed by households in South Sudan. The composition of the goods and services in the basket reflects consumption of the average household in South Sudan. The change in the CPI over time indicates how much more expensive it is for the average household to continue consuming the same basket of goods and services. The percentage change in the CPI is consumer price inflation. It is an important tool to measure both development of the economy and the welfare of households.

Annual Consumer Price Inflation Rate:

Annual consumer price inflation is the percentage change in the CPI over the course of one year. It is the most commonly used measure of consumer price inflation.

Monthly Consumer Price Inflation Rate:

Monthly consumer price inflation is the percentage change in the CPI over the course of one month.

Monthly consumer price index does not take into account the variations in the population's consumption pattern caused by entry and exit of seasonal products in the market. Seasonal products are those which are only available part of the year, such as mango, papaya, or cassava and whose supply is significantly affected by the changing of the seasons, such as green okra. Monthly CPI should therefore be interpreted and used with caution.

On an annual basis CPI is less affected by the entry and exit of seasonal products in the market.
